LOCAL RETRIEVAL DIAGNOSTICS · EVIDENCE-FIRST EVALUATION

RAGvidence

A reproducible report showing whether retrieval returned all evidence required to answer each reviewed question.

Evidence-backed diagnosis

MEDIUM CONFIDENCE

What changed, what the evidence supports, and what to test next.

Observed pattern

Missing structural context in the baseline representation

Evidence

3 failed queries passed after enrichment with no regressions.

Recommended next experiment

Repeat on a frozen slice of your own corpus and inspect every changed rank.

Diagnostic limit

This rule identifies correlation in a small labeled comparison, not universal causation.

Limitations

SCOPE

Read these constraints before generalizing the result.

- Constructed teaching data and a small reviewed question set.
- Retrieval evaluation does not prove generated-answer correctness.
- Results apply to the recorded strategy, representation, dataset and k.

Generated locally by RAGvidence · No source documents or credentials are embedded beyond the recorded previews.
